ABSTRACT OF THE DISCLOSURE

An object management system and method. The system includes an object access interface, a resource management module, an access management module and an object management module. The object access interface receives an access request, from an entity, including at least identification of the entity, a source port, object information and access content. The resource management module assigns a command handler to the access request. The access management module determines authority for the access request. The object management module performs a procedure corresponding to the access content on the object designated by the object information. After the procedure is finished, the command handler is released.
